PRIMROSES FROM SKY HOOK

PRIMULAS are perennials of easy culture for the partially shady areas of your garden. They are ideal for edging a path, as a low border or in a nook or ravine they will enhance your spring and early summer garden in a rainbow color range.

The primroses grown at Sky Hook have weathered two severe Vermont winters and have heavy and vigorous root development. The soil should be cultivated to a depth of eight to ten inches and enriched with humus and organic fertilizer. A summer mulch is beneficial to conserve moisture and to allow a cool root run.

All plants are dug to order, packed in plastic bags and shipped the same day to ensure freshness on arrival by parcel post special handling. Add 20% for shipping charges on orders under \$5.00. On orders from \$5.00 to \$10 add 10%. Orders from \$10.00 to \$15.00 add 5%. Orders over \$15.00 are postpaid.

Our liability in all cases is limited to replacement of plants not true to name or a refund of the original purchase price.

SKY HOOK FARM

Johnson, Vermont

DENTICULATA GROUP

The first primrose to bloom in early spring is the stunning lavender to lilac P. denticulata. The florets form a compact mass in a three inch round flower head. The white form appear as snowballs mysteriously left from winter on a flower bedecked landscape.
